

Amendments to the Specification:

Insert a new paragraph beginning on line 13 of column 4 as follows:

FIG. 13a is like FIG. 13 with a pin inserted in the detents;

Amend the paragraph beginning on line 54 of column 6 as follows:

Another alternative component for insuring the secure positioning of shelf 20 against post 58 as a rolled pin [go] 90 as shown in FIGS. 17 and 18. Pin [go] 90 is formed from a sheet of preferably metallic material in flat form which is thereafter rolled to form a cylindrical and somewhat flexible pin. The springiness of pin [go] 90 permits it to be slightly compressed when placed in aperture 72 and indents 74 so that upon release, it springs outwardly against the surfaces of those elements and resists any movement of shelf 20 with respect to post 58.
